

BPA DECLARATION

January 28th, 2014

To Whom it May Concern,

We confirm that the entire Waterlogic machine range, including the WL3 in the version Cold / Ambient / Sparkling, does not contain as intentional additives Bisphenol A and are not made using BPA. Based on the information available to us from our raw material suppliers, Bisphenol A is not expected to be present in any of our components. All plastic components in our machines are regularly tested in third party laboratories for the presence of BPA to ensure they fully comply with all international regulations.

Yours sincerely

Jonathan Ben-David
